AM-110 LCD Monitor Arm

\$251.33

Ideal monitor positioning is a hard nut to crack. Standard monitor mount solutions, such as what comes out of the box with an average LCD monitor is very inflexible, allows minimal adjustment and consumes a lot of valuable work area. With the AM-110, users can collapse the monitor out of the way to a depth of 4" when they're not using it. Reading, writing, and proofing hardcopy documents can now be done right in front of the keyboard rather than to the side.

The AM-110 features a ball-swivel mount on the monitor side, allowing full north-south rotation, a full range of tilt and side to side rotation. The arm is spring assisted allowing effortless adjustment. The AM-110 also has integrated cable management to keep the users work space tidy.

The AM-110 attaches to your work surface with a proprietary clamping system. Grommet mount and wall mount options available upon special request.
